

Moonphase

The new moonphase

Thanks to Geneva watchmaker ingenuity, Montres Chouriet has developed a unique movement to display the moon cycle. The decoration of the movement has been the subject of extensive research and many attempts have uncovered exceptional and innovative material effects. Mother-of-Pearl gives a surprisingly realistic interpretation of the glimmering, cratered Moon.

Détails techniques:

Reference: 29.1178.G.6.8.03.2

Automatic movement ETA 2892 with Montres Chouriet module

Function: hours minutes seconds and large moonphase

Stainless steel case with sapphire crystal front and back, water resistant 30m

Strap: leather with folding clasp
